# 1 Lexical Analysis

## 1.1 Give 5 different strings belonging to the language described by this reg-Exp.

1. aab
2. bbaa
3. ababab
4. aaaaaaa
5. bbbbbbbbbbbbbbbbbbbbbbbbbbbbbbbbab

## 1.2 Construct the NFA from this regExp (Thompson Construction

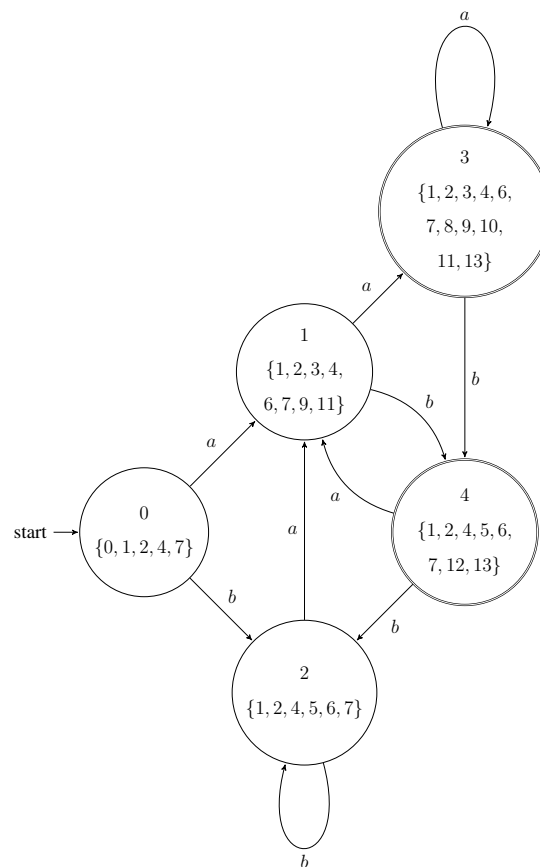

## 1.3 Transform the NFA into a DFA (justify important steps, $\epsilon$ -closures).

Steps from NFA to DFA :

- $s_0 = \epsilon - \text{closure}(\{0\}) = \{0, 1, 2, 4, 7\}$
- $m(s_0, a) = s_1$ , where  $s_1 = \epsilon - \text{closure}(\{3, 8\}) = \{1, 2, 3, 4, 6, 7, 9, 11\}$

- $m(s_0, b) = s_2$ , where  $s_2 = \epsilon - \text{closure}(\{5\}) = \{1, 2, 4, 5, 6, 7\}$
- $m(s_1, a) = s_3$ , where  $s_3 = \epsilon - \text{closure}(\{3, 8, 10\}) = \{1, 2, 3, 4, 6, 7, 8, 9, 11, 13\}$
- $m(s_1, b) = s_4$ , where  $s_4 = \epsilon - \text{closure}(\{5, 12\}) = \{1, 2, 4, 5, 6, 7, 12, 13\}$
- $m(s_2, a) = s_1$
- $m(s_2, b) = s_2$
- $m(s_3, a) = s_3$
- $m(s_3, b) = s_4$
- $m(s_4, a) = s_1$
- $m(s_4, b) = s_2$

Since  $s_3$  and  $s_4$  contain state 13 which was final in the NFA, they are both final state too.

## 1.4 Minimize the DFA (Hopcroft Algorithm).

The DFA could be divided in four partitions :

- Two partitions for final states
- A partition which contains previous states  $\{0, 2\}$  because :
  - $m(0, a) = 1$
  - $m(2, a) = 1$
  - $m(0, b) = 2$
  - $m(2, b) = 2$
- A partition which contains previous state  $\{1\}$  :
  - $m(1, a) = 3$
  - $m(1, b) = 4$

## 2 Parsing

### 2.1 LL(1) Grammar

This grammar is not LL(1) because it has a rule with left recursion:  $B := Bv$  and  $B := w$ .

### 2.2 Modify the grammar

We replaced the left recursion with a right recursion to avoid the problem indicated in the first exercise.

$$B := wB'$$

$$B' := vB'$$

$$B' := \epsilon$$

Thus, we removed from the grammar the rules  $B := Bv$  and  $B := w$  and we introduced rules above.

### 2.3 Sets for this grammar

$$first(u) = \{u\}$$

$$first(v) = \{v\}$$

$$first(w) = \{w\}$$

$$first(x) = \{x\}$$

$$first(y) = \{y\}$$

$$first(z) = \{z\}$$

$$\epsilon \in first(E), first(F), first(B')$$

$$Rule1 : S ::= uBDz$$

$$first(uBDz) = \{u\}$$

$$\rightarrow u \in first(S)$$

$$\text{Rule2} : B ::= wB'$$

$$\text{first}(wB') = \{w\}$$

$$\rightarrow w \in \text{first}(B)$$

$$\text{Rule3} : B' ::= wB'$$

$$\text{first}(vB') = \{v\}$$

$$\rightarrow v \in \text{first}(B')$$

$$\text{Rule5} : D ::= EF$$

$$\text{first}(EF) = \text{first}(E) \setminus \{\epsilon\} \cup \text{first}(F) \text{ (car } E \in \text{first}(E)) = \{x, y, E\}$$

$$\rightarrow x, y, E \in \text{first}(D)$$

$$\text{Rule6} : E ::= y$$

$$y \in \text{first}(E)$$

$$\text{Rule8} : F ::= x$$

$$x \in \text{first}(F)$$

$$\text{first}(S) = \{u\}$$

$$\text{first}(B) = \{w\}$$

$$\text{first}(B') = \{v, \epsilon\}$$

$$\text{first}(D) = \{x, y, \epsilon\}$$

$$\text{first}(E) = \{y, \epsilon\}$$

$$\text{first}(F) = \{x, \epsilon\}$$

### **Follow**

$$\#E \text{ follow}(S)$$

$$\text{Rule1} : S ::= uBDz$$

$$\rightarrow \{x, y, z\} \subset \text{Bfollow}(B)$$

$$\text{and } z \in \text{follow}(D)$$

$$\text{Rule2} : B ::= wB'$$

$$\rightarrow \text{follow}(B) = \{x, y, z\} \subset \text{follow}(B')$$

$$\text{Rule5} : D ::= EF$$

$$\rightarrow x \in \text{follow}(E)$$

$$\text{follow}(D) = \{z\} \subset \text{follow}(E)$$

and  $\text{follow}(D) = \{z\} \subset \text{follow}(F)$

$\text{follow}(S) = \{\#\}$

$\text{follow}(B) = \{x, y, z\}$

$\text{follow}(B') = \{x, y, z\}$

$\text{follow}(D) = \{z\}$

$\text{follow}(E) = \{x, z\}$

$\text{follow}(F) = \{z\}$

## 2.4

*Rule1* :  $S ::= uBDz$

$\rightarrow \text{table}[S, u] = 1$

*Rule2* :  $B ::= wB'$

$\rightarrow \text{table}[B, w] = 2$

*Rule3* :  $B' ::= vB'$

$\rightarrow \text{table}[B', v] = 3$

*Rule4* :  $B' ::= \epsilon$

$\rightarrow \text{table}[B', x] = 4$

$\rightarrow \text{table}[B', y] = 4$

$\rightarrow \text{table}[B', z] = 4$

*Rule5* :  $D ::= EF$

$\rightarrow \text{table}[D, x] = 5$

$\rightarrow \text{table}[D, y] = 5$

$\rightarrow \text{table}[D, z] = 5$

*Rule6* :  $E ::= y$

$\rightarrow \text{table}[E, y] = 6$

*Rule7* :  $E ::= \epsilon$

$\rightarrow \text{table}[E, x] = 7$

$\rightarrow \text{table}[E, z] = 7$

*Rule8* :  $F ::= x$

$\rightarrow \text{table}[F, x] = 8$

*Rule9* :  $F ::= \epsilon$

$\rightarrow \text{table}[F, z] = 9$

	u	v	w	x	y	z
S	1					
B			2			
B'		3		4	4	4
D				5	5	5
E				7	6	7
F				8		9
